SUMMARY

Backend engineer with 5 years building distributed systems and financial infrastructure — loan origination, underwriting, and credit decisioning at production scale. Deep experience in Go concurrency, real-time streaming (RTMP/HLS/WebRTC), and event-driven architecture on GCP. LeetCode Knight — top 2.71% globally in contest rating, 1000+ problems solved.

EXPERIENCE

Software Developer — SMC Finance (Moneywise Financial Services Pvt. Ltd.) *Delhi · Oct 2023 – Present*

- Designed and shipped a centralised, configuration-driven workflow engine for a multi-stage loan origination pipeline processing thousands of applications a month, replacing per-stage hardcoded transition and validation logic — business teams now reconfigure stage flows and validation rules without code changes or releases.
- Engineered the core Underwriting Decisioning Engine covering the end-to-end credit lifecycle, managing concurrent state transitions across multi-stage approvals with isolated TypeORM transactions on SQL Server to guarantee ACID compliance under concurrent writes.
- Built an event-driven microservice on NestJS and GCP Pub/Sub automating collateral initiation workflows, replacing manual credit-verification steps with asynchronous workers and achieving fault-tolerant message delivery with zero data loss.
- Designed the RESTful API layer for the loan origination pipeline, including a custom weighted round-robin distributor allocating valuation tasks across external agencies.
- Maintained 90% Jest coverage across critical financial modules; cut client-side network I/O 60% with an RxJS caching tier.

Freelance Backend Engineer (Part-time) — Live Social Video Platform *Remote · Sep 2025 – Present*

- Sole backend engineer for a live social video application — own architecture, API design, real-time WebSocket presence layer, and MongoDB data modelling end to end.
- Built a live video streaming server in Go (RTMP ingest, FFmpeg transcoding, HLS delivery), offloading CPU-bound media processing from the Node.js backend — goroutine-per-stream concurrency with channel-based synchronisation for multi-broadcast fan-out.
- Implemented WebRTC signalling and call-state management in Go for multi-party sessions, handling reconnection and graceful degradation under network loss.
- Built a real-time on-device ML inference pipeline for AR filters — native C++, MediaPipe face tracking, and a custom camera pipeline with a React Native bridge.

Solution Developer — iTech Mission Pvt. Ltd. *Delhi · Sep 2022 – Aug 2023*

- Built a real-time analytics pipeline over WebSockets streaming 10,000+ live data points with sub-second update latency; led the migration of legacy UI codebases to a decoupled component architecture.

Full Stack Developer — Almondz Global Securities Ltd. *Delhi · Jun 2021 – Sep 2022*

- Engineered a secure Learning Management System from the ground up with strict RBAC and data isolation across internal financial teams; optimised SQL queries and schema design for reporting over large operational datasets.

PROJECTS

LifeBoard — lifeboardos.com *NestJS · MongoDB · GCP · Co-built; led backend design*

- Led the backend of a journaling product on Cloud Run: 13 feature modules, JWT + Google OAuth + email-OTP auth, per-endpoint rate limiting, Web Push reminders, and a tag-driven release pipeline gated on tests.
- Designed per-user envelope encryption — AES-256-GCM data keys wrapped by Cloud KMS, ciphertexts bound to owner and field — rolled out in reversible off → write → strict stages with an idempotent backfill and a verification script.
- Migrated media from base64 in MongoDB to Cloud Storage with no downtime (signed links, per-user quotas, orphan sweep); replaced in-process timers with a Cloud Scheduler-triggered, OIDC-guarded sweep so reminders fire reliably on a scale-to-zero service.

TECHNICAL SKILLS

Languages: Go, TypeScript/JavaScript, C++, SQL
Backend: NestJS, Node.js, WebSockets, WebRTC, RTMP/HLS, FFmpeg, Microservices, Event-Driven Architecture, REST APIs
Data: SQL Server, PostgreSQL, MongoDB, Redis, TypeORM
Infrastructure: GCP (Cloud Run, Pub/Sub, Cloud KMS, Cloud Storage, Cloud Scheduler), Docker, CI/CD, GitHub Actions
Systems & CS: Distributed Systems, Concurrency, Message Queues, HLD/LLD, Design Patterns | Angular, RxJS, NgRx
AI-Assisted Development: Agentic coding workflows — scaffolding, verification, and review of AI-generated code

EDUCATION

MDU Rohtak — B.Sc. Physics, Chemistry, Mathematics *2016 – 2020*
